# INVESTMENTS AND INVESTMENT PRODUCTS

📈 U.S. Stocks (S&P500)

🏆 Gold

🏠 Real Estate

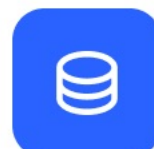

🔗 Crypto (Bitcoin)

🔍 Manual Trading

🔄 Automated Trading

## AND INVESTMENT PRODUCTS

### U.S. STOCKS (S&P500)

 Average yearly returns  
7-11%

 Risk factor  
Medium

#### + Pros

1. Widely diverse option with relatively low risks.
2. Highly liquid assets, when compared to real estate or gold.
3. Indices present a simple solution fit for newbie investors.  
It is not necessary to have special knowledge or analyse the market situation.
4. No overpayments on commissions when compared to active portfolio management.

#### - Cons

1. Uneven distribution of assets. Almost 30% of the entire index is concentrated in only 10 companies out of 500. Thus, there is a dependence between the index dynamics and the largest companies' performance.
2. Requires patience. Investment horizon for indices is usually set at 20-40 years, which provides great compound returns.
3. During economic crises, indices value will decrease along with the economy, and it may take a long time to rebound back to its original position.

### GOLD

 Average yearly returns  
6-8%

 Risk factor  
Low

#### + Pros

1. Easy to buy. Individuals can buy gold bars from institutions whose activities are confirmed by a license.
2. Reliability. Paper money can depreciate and things can deteriorate, but gold, when properly stored, is not subject to the influence of time.
3. Gold bar is your full-fledged property to which all property rights are applied. It can be pledged, inherited, bequeathed or gifted.

#### - Cons

1. Purchase and sale of precious metals is subject to additional tax.
2. Spread between buying and selling price is too wide.
3. If you decide to store a gold bullion outside a banking institution, then you'll need to account for additional expenses (Authenticity check;) also, any damage, be it a dent, scratch or something else, reduces the price of the asset.
4. Low profitability and no real passive income. Buying gold is more about preserving your savings than making big profits.

## AND INVESTMENT PRODUCTS

### REAL ESTATE

Average yearly returns  
**8-12%**

Risk factor  
**Low**

#### + Pros

1. Liquidity of the estate.
2. Possibility of obtaining long-term passive income.
3. Ease of purchase/sale.
4. Large selection of residential and commercial properties.
5. Minimal risks. Even during a crisis, real estate can be sold or rented out. Options for making a profit: rent out daily or for the long term, resell, divide into small segments.

#### - Cons

1. High entry threshold and long payback period.
2. Vulnerability to force majeure (fire, natural disasters, war).
3. Demand and prices are highly dependent on the situation in the region, especially influenced by epidemiological, economic and geopolitical factors.
4. It is necessary to spend additional funds on maintenance - repair work, payment of taxes and utilities.
5. The smaller the city, the lower the demand for real estate.

### CRYPTO (BITCOIN)

Average yearly returns  
**60-400%**

Risk factor  
**High**

#### + Pros

1. Decentralization - the network is distributed among millions of users.
2. No restrictions on payments.
3. No large commissions.
4. A scarce and deflationary asset - a limited number of coins and high demand contributes to a strong increase in value.
5. Low entry threshold for investment.
6. When used correctly, Bitcoin can be used as an anonymous currency free from government oversight.

#### - Cons

1. Many governments will attempt to ban mining and the use of cryptocurrency.
2. High volatility. Any crypto, even Bitcoin can rise to the moon or fall sharply.
3. Lack of acknowledgement. Not many users know about Bitcoin and the main features of the currency.
4. No chargebacks! Once you send a transaction, it cannot be reversed.
5. If handled incorrectly, you can easily lose all your assets and funds.

## AND INVESTMENT PRODUCTS

### MANUAL TRADING

Average yearly returns  
**50-100%**

Risk factor  
**Very High**

#### Pros

1. Full control of the situation and (almost) unlimited income in a short time.
2. Ability to make prompt adjustments to the deal.
3. Active use of fundamental and technical analysis.
4. Adequate assessment of market trends.
5. There are no geographical restrictions. You can work from anywhere in the world, even on the beach, if you have a laptop and connection to the Internet.

#### Cons

1. 90% of traders suffer losses.
2. The human factor is prevalent – emotions can take over and self-discipline is also often lacking.
3. Lack of round-the-clock monitoring of an open position.
4. Possible failure to comply with the trading strategy, exceeding acceptable risks.

### AUTOMATED TRADING

Average yearly returns  
**70-150%**

Risk factor  
**Medium-High**

#### Pros

1. Full automation and absence of the “human factor”.
2. Speed of operations.
3. 24-hour trading and control over the market situation.
4. Flexibility and control.
5. Trading systems provide detailed statistics and analytics on trades, which might help traders better understand their results.

#### Cons

1. Extremely high cost of development and maintenance.
2. Constant support and software updates.
3. To ensure round-the-clock trading, you'll need to run your software on a dedicated server, which not everyone can afford.
4. ATS do not respond to force majeure circumstances - political events, economic changes and other unpredictable events.
5. Regular monitoring and maintenance procedures are required.

Cryptocurrencies have become widespread relatively recently, in 2008.

When compared to traditional finance, the main difference of this market lies in extremely high volatility and a lot less imposed regulations.

Existing regulatory restrictions in financial markets (e.g. Forex, Nasdaq, NYSE) can give retail traders a false sense of transparency and fairness in trading.

However, retail investors are limited in abilities at the expense of institutional players with direct access to market data and expensive solutions.

In order to gain an edge in the market, these companies use advanced mathematical algorithms that can execute over 1,000 trades per second.

In reality, only 6 companies earn more than 80% of all the profits from automated trading.

CITADEL | Securities

TWO SIGMA GTS HRT

imc [XTX]  
VENTURES

## Automated trading in financial markets, %

FOREX

~92%

U.S. & EU Stock Market

~85%

Crypto Market

~40%

⚠ High volatility is one of the factors that allows the cryptocurrency market to remain more open to retail investors. Majority of trades in the forex (92%) and equity markets (85%) is executed by institutional automated trading systems, although for crypto market this share tends to only be near 40%.

## OF A MARKET CYCLE

The INTEGRA ecosystem capitalizes on the opportunities of the crypto market and develops unique trading solutions that provide superior returns for investors.

Thanks to full-fledged tests in YY2020-2023, Integra products have been able to go through the full market cycle and show their reliability and profitability both during bull markets and bear trends.

| CRITERIA                    | FIAT  | CRYPTO  |
|-----------------------------|---|---|
| COUNTERFEIT PROTECTION      | First attempts at counterfeiting began simultaneously with the introduction of payment instruments into economy, and now there are advanced solutions that allow for the creation of indistinguishable fakes. Counterfeiters take advantage of the fact that official information about the issuance of funds is never disclosed, so it is impossible to track counterfeit banknotes at the time of printing. | Digital mechanism of the blockchain network prevents unnoticed issuance of additional coins. Transparency of the blockchain network allows you to constantly monitor data about the token (price, number of tokens in circulation, total issuance) to find out about the additional issuance of tokens and prevent them from entering circulation.  |
| ACCESS TO ACCOUNT           | Limited, can be blocked by regulators   | Universal access, only limited by availability of connection to Internet  |
| FEES AND PAYMENTS           | High fees for cross-border and cross-institutional payments   | ~0%, fees are necessary for the network to operate  |
| MARKET PROSPECTS            | Decrease in market share due to the popularity of cryptocurrencies and price growth for services as a result. Fiat banking infrastructure has already shown its inefficiencies along with extremely high service costs (branches, ATMs, fund collection, employee salaries). As a result, we can see rising prices for banking services with deteriorating quality.   | Cryptocurrency adoption rates are growing every year. In 2022, over 70% of the adult population of the EU already knows what cryptocurrency is, and ~39% have used cryptocurrency at least once. In addition, the regulatory background around cryptocurrencies today is conducive to their development within the law framework: more and more countries are developing their own variations of cryptocurrency - CBDC (Central Bank Digital Currency). |
| DEPENDENCY ON THIRD PARTIES | Complete dependence on regulators and banks   | All information recorded in the blockchain remains accessible and transparent to all users, without the possibility of deletion or modification by one sole actor   |
| SPEED AND TECHNOLOGY        | Outdated technologies and protocols, cross-border payments take 2-3 banking days to be completed  | Modern distributed architecture with high throughput (cross-border payments are completed in a matter of seconds)   |

## IN CRYPTO MARKET

### LONG-TERM INVESTMENTS

Purchase of any crypto asset with a long-term goal of increasing capital

 Risk factor  
**Low-Medium**

#### Pros

1. Save your nerves – no need to watch the market daily, main thing here is patience.
2. It is not necessary to understand trading to make money – correct analysis of the market and deep research into your assets will play a bigger role.
3. You don't trade, which means you don't pay any transaction fees.
4. Holders sometimes receive additional coins (example: hard forks).

#### Cons

1. You may lose your investment if the coins disappear or become worthless.
2. The coin may not rise in price because the development team does not set itself such a goal - the risk of falling into fraudulent projects.
3. Hodlers do not monitor the market situation and therefore may miss a profitable opportunity to sell coins in order to lock in profits.

### MINING

Using special electronic equipment to process transactions and extract (mine) cryptocurrencies

 Risk factor  
**Medium**

#### Pros

1. You receive cryptocurrency as a reward for processing transactions.
2. Decentralisation. Miners keep the network running without the need for centralised management.
3. Initial expenses are used to purchase specialised hardware, which can be suitable for other computing tasks.

#### Cons

1. Mining requires significant investments into hardware, power sources and cooling, which can reduce profits.
2. Competition. As the number of miners increases, the difficulty of mining also raises exponentially.
3. Technical issues with equipment setup and maintenance.
4. No guaranteed ROI – as it all depends on the state of the market.

## IN CRYPTO MARKET

### PARTICIPATION IN PRE-SALE, IDO

Purchasing new tokens during early sale stages

 Risk factor  
**High**

#### Pros

1. Opportunity to purchase tokens earlier and at a lower price than on public exchanges.
2. Extremely high profit potential.
3. Participation in the development of the project – investors can often express their opinions and suggestions to the team.

#### Cons

1. Investing at early stages is associated with higher risks, since the project is yet to prove its viability and success.
2. A project may disclose limited information, making risk assessment more difficult.
3. Early stage investors have a higher chance to encounter scams or unreliable projects.

### AIRDROP, RETRODROP & TESTNET

Earning new tokens as a reward for engaging in project activity

 Risk factor  
**Low**

#### Pros

1. A good option to start your journey in the world of cryptocurrencies without investments and financial risks.
2. The opportunity to receive free tokens, which can subsequently bring relatively large profits.
3. Drop hunters will shill your product – free advertising.

#### Cons

1. Typically, the amount of tokens in a drop is small and potential profit may be insignificant.
2. Fraudulent projects that aim to gain access to your personal data.
3. High chances of wasting time, money (applies to advanced hunters) and earning nothing in return.

## IN CRYPTO MARKET

### CRYPTO ARBITRAGE

Simultaneous purchase and sale of the same or similar asset in different markets in order to profit from tiny differences in the asset's pricing.

 Risk factor  
**Medium**

#### + Pros

1. Ability to get instant profit without any forecasts.
2. Minimal risk. Profit margin can be calculated before the transaction is even completed.
3. Simplicity. You can manually buy and sell crypto on different platforms with minimal knowledge of the internal process.

#### - Cons

1. Large initial capital is needed, because profit margin (price difference between platforms) is extremely small. Along with that, part of the profit is eaten up by trading fees.
2. Arbitrage trading is prohibited on many platforms and can result in account suspension and complete loss of funds.
3. Low liquidity of assets – you can buy an asset at a low price, but have difficulty selling it.

### MANUAL TRADING

Process of buying and selling of financial instruments (securities, stocks, bonds, crypto, currencies) in order to make a profit in short-term period.

 Risk factor  
**High**

#### + Pros

1. High volatility and access to trading 24/7.
2. Full control over the process.
3. Work from anywhere in the world.
4. Unlimited potential income.
5. Strengthening character. The longer you spend in trading, the more stable your psychological state becomes.

#### - Cons

1. Complexity. Not every person can learn to trade - according to statistics, only 1-5% of traders make money.
2. Risks. If you do not follow the rules of risk- and money management, then the loss of your deposit will be guaranteed.
3. Time costs. The trader is constantly in front of the computer, looking for profitable trades, monitoring signals, analyzing charts.

United by the vision of creating a trusted and autonomous financial ecosystem, we intend to change current trading trends by providing retail investors with access to modern, institutional-grade trading tools for risk assessment, financial analysis and automated trading.

Our goal is to grow the automated trading industry and create an innovative environment where all participants can thrive through collaboration. We build partnerships with clients based on mutual trust and respect, and do everything possible to help them achieve financial success.

## 8 DATA ANALYSTS

Development of machine learning algorithms for analyzing and processing data on historical trading on world markets, development of the core AI model of the AI-Trader EX algorithm

## 12 YEARS OF EXPERIENCE

A team of developers and analysts with vast experience in stock markets, who apply their practical knowledge into the products for Integra ecosystem

## 10 SOFTWARE DEVELOPERS

Development of the platform, integration of algorithms and trading strategies into the company's products, quality control and assurance

## 7 FINANCIAL ANALYSTS

Creation and manual testing of new trading strategies, development of a methodology for analyzing the news and media environment, planning long-term positions and scaling the company

Through the INTEGRA ecosystem, we provide the opportunity for every person to earn income in the cryptocurrency market.

Any user can easily and intuitively make profit in the crypto market using our tools without special training or mentors.

## BY PROVIDING THESE OPPORTUNITIES, WE PURSUE OUR GLOBAL GOALS:

Growth of the INTEGRA community will attract valuable partnerships to expand our products' outreach to new geographic markets.

Increase of the trading capital allows to obtain greater profits from currently operating products and provides additional funds for development of new features.

Established community of like-minded visionaries who will use the ecosystem and our products not only for short-term profits, but will also actively implement their vision in Integra's solutions to contribute to the development of our ecosystem.

## ECOSYSTEM

### TRADING SOLUTIONS

#### **INTEGRA AI-TRADER EX**

Automated trading system which combines artificial intelligence and neural network technologies to analyse mid-term positions.

#### **INTRADAY TRADING TEAM**

Team of practicing traders conducts intraday trading and shares their strategies.

#### **INTEGRA HFT BOT**

Solution that provides a way to automate high-frequency trading on short positions.

#### **INTEGRA WALLET**

Non-custodial Web3.0 wallet with advanced privacy options.

#### **INTEGRA LIQUIDFLOW PROTOCOL**

Decentralized protocol for crowdsourced aggregation and provision of liquidity through use of the b2b model.

#### **INTEGRA SAAS TRADING PLATFORM**

Trading platform for corporate clients built on the basis of the LiquidFlow Protocol.

## WHAT ARE AUTOMATED TRADING SYSTEMS?

ATS (Automated Trading System) is an algorithm that serves for full or partial automation of trading and combines several trading strategies to provide enhanced accuracy in decision-making and lower the risks of failed trades when opening a position.

Algorithmic trading systems are able to minimize the time it takes for trader to analyze the market and price movements on various currency pairs thanks to the following advantages:

### ADVANCED RISK MANAGEMENT

Before placing a trade, algorithm analyzes the environment and sources out relevant news in order to adjust the strategy if any important information is detected.

### HIGH SPEED AND ACCURACY OF OPERATIONS

On average, human trader needs ~10 seconds to open an order. In comparison, algorithm can process and open over 1,000 orders in that time frame.

### ZERO HUMAN EMOTIONS

Emotional stress can negatively affect decision-making during trading. The algorithm is guided by mathematical models and its decisions will not be influenced by emotions.

### INFINITE EFFICIENCY

Unlike a human, an automated system is able to analyse the market and make decisions without pauses or delays, in order not to miss any profitable trades.

Supports simultaneous operations on multiple exchanges and with multiple trading pairs, enabling us to implement complex trading strategies

## INTEGRA AI-TRADER EX

Automated trading system for crypto market which combines artificial intelligence and neural network technologies for in-depth analysis of mid-term positions.

## EXTRA ENHANCED EDUCATION AND TESTING

AI-Trader EX has been tested over the past 2 years and has shown decent results in all market cycles. When training the system, historical trading data was used, as well as specially generated data on fictitious transactions, to recreate a larger number of situations.

Fully autonomous trading algorithm with no need for manual configuration

Estimated profitability – up to 15% per month (historical data for YY2020-2023)

Strict approach to risk management is ensured by constant market analysis

Operates 24 hours a day, without unplanned downtimes

## TRADING TEAM

Before integration, new trading strategies are tested manually, under the guidance of expert analysts.

Several teams of traders carry out intraday trading on the crypto market through manually crafted strategies.

### DAILY PROFITS & FLEXIBLE RISKS MANAGEMENT SYSTEM

Acceptable loss (stop-loss) for a single intraday position – from 0.25% to 1%

- When testing new assets and markets, no more than 0.25% risk is acceptable for each trade.
- For counter-trend positions with a high probability of risk – acceptable loss is set at 0.5%.
- A maximum risk of 1% is acceptable when the market situation meets all the criteria of the analysis and trading strategy by at least 75%.

To maintain efficiency, each trader on the team executes no more than 3-5 trades per day.

Maximum acceptable loss during a single trading day is no more than 1.5% on all open positions.

If this mark is exceeded, all positions will be closed and the trader will have to end the trading session.

To hedge risks, we use a portfolio of solid and highly liquid assets with moderate volatility. Such assets include BTC, ETH, ATOM, LINK, DYDX and others.

## (HIGH FREQUENCY TRADING) BOT

- ✓ One of our products aimed at diversifying trading risks, which has 3 trading modes: flat, rising and falling.
- ✓ The bot automatically switches between modes based on the specific situation, coin and moment in time in order to get maximum profit from the transaction.

The robot's **ultra-fast architecture** is based on microservices and runs via cloud storage, enabling the system to scale indefinitely without loss of performance.

**Token Whitelist** — the robot trades only with an approved list of coins and trading pairs, for better risk control.

**Personal proxying** opens access to previously locked platforms and protects against bans.

**Encrypted via AES-256 standard** — we utilize the most secure encryption system in the world.

**Protection against sharp market crashes** – robot does not open unnecessary positions on non-rebounding downward movements in the market

**Integrated trailing functionality** – the robot is able to catch sudden upward price movements (pumps) and make additional profit on them.

## STRATEGY

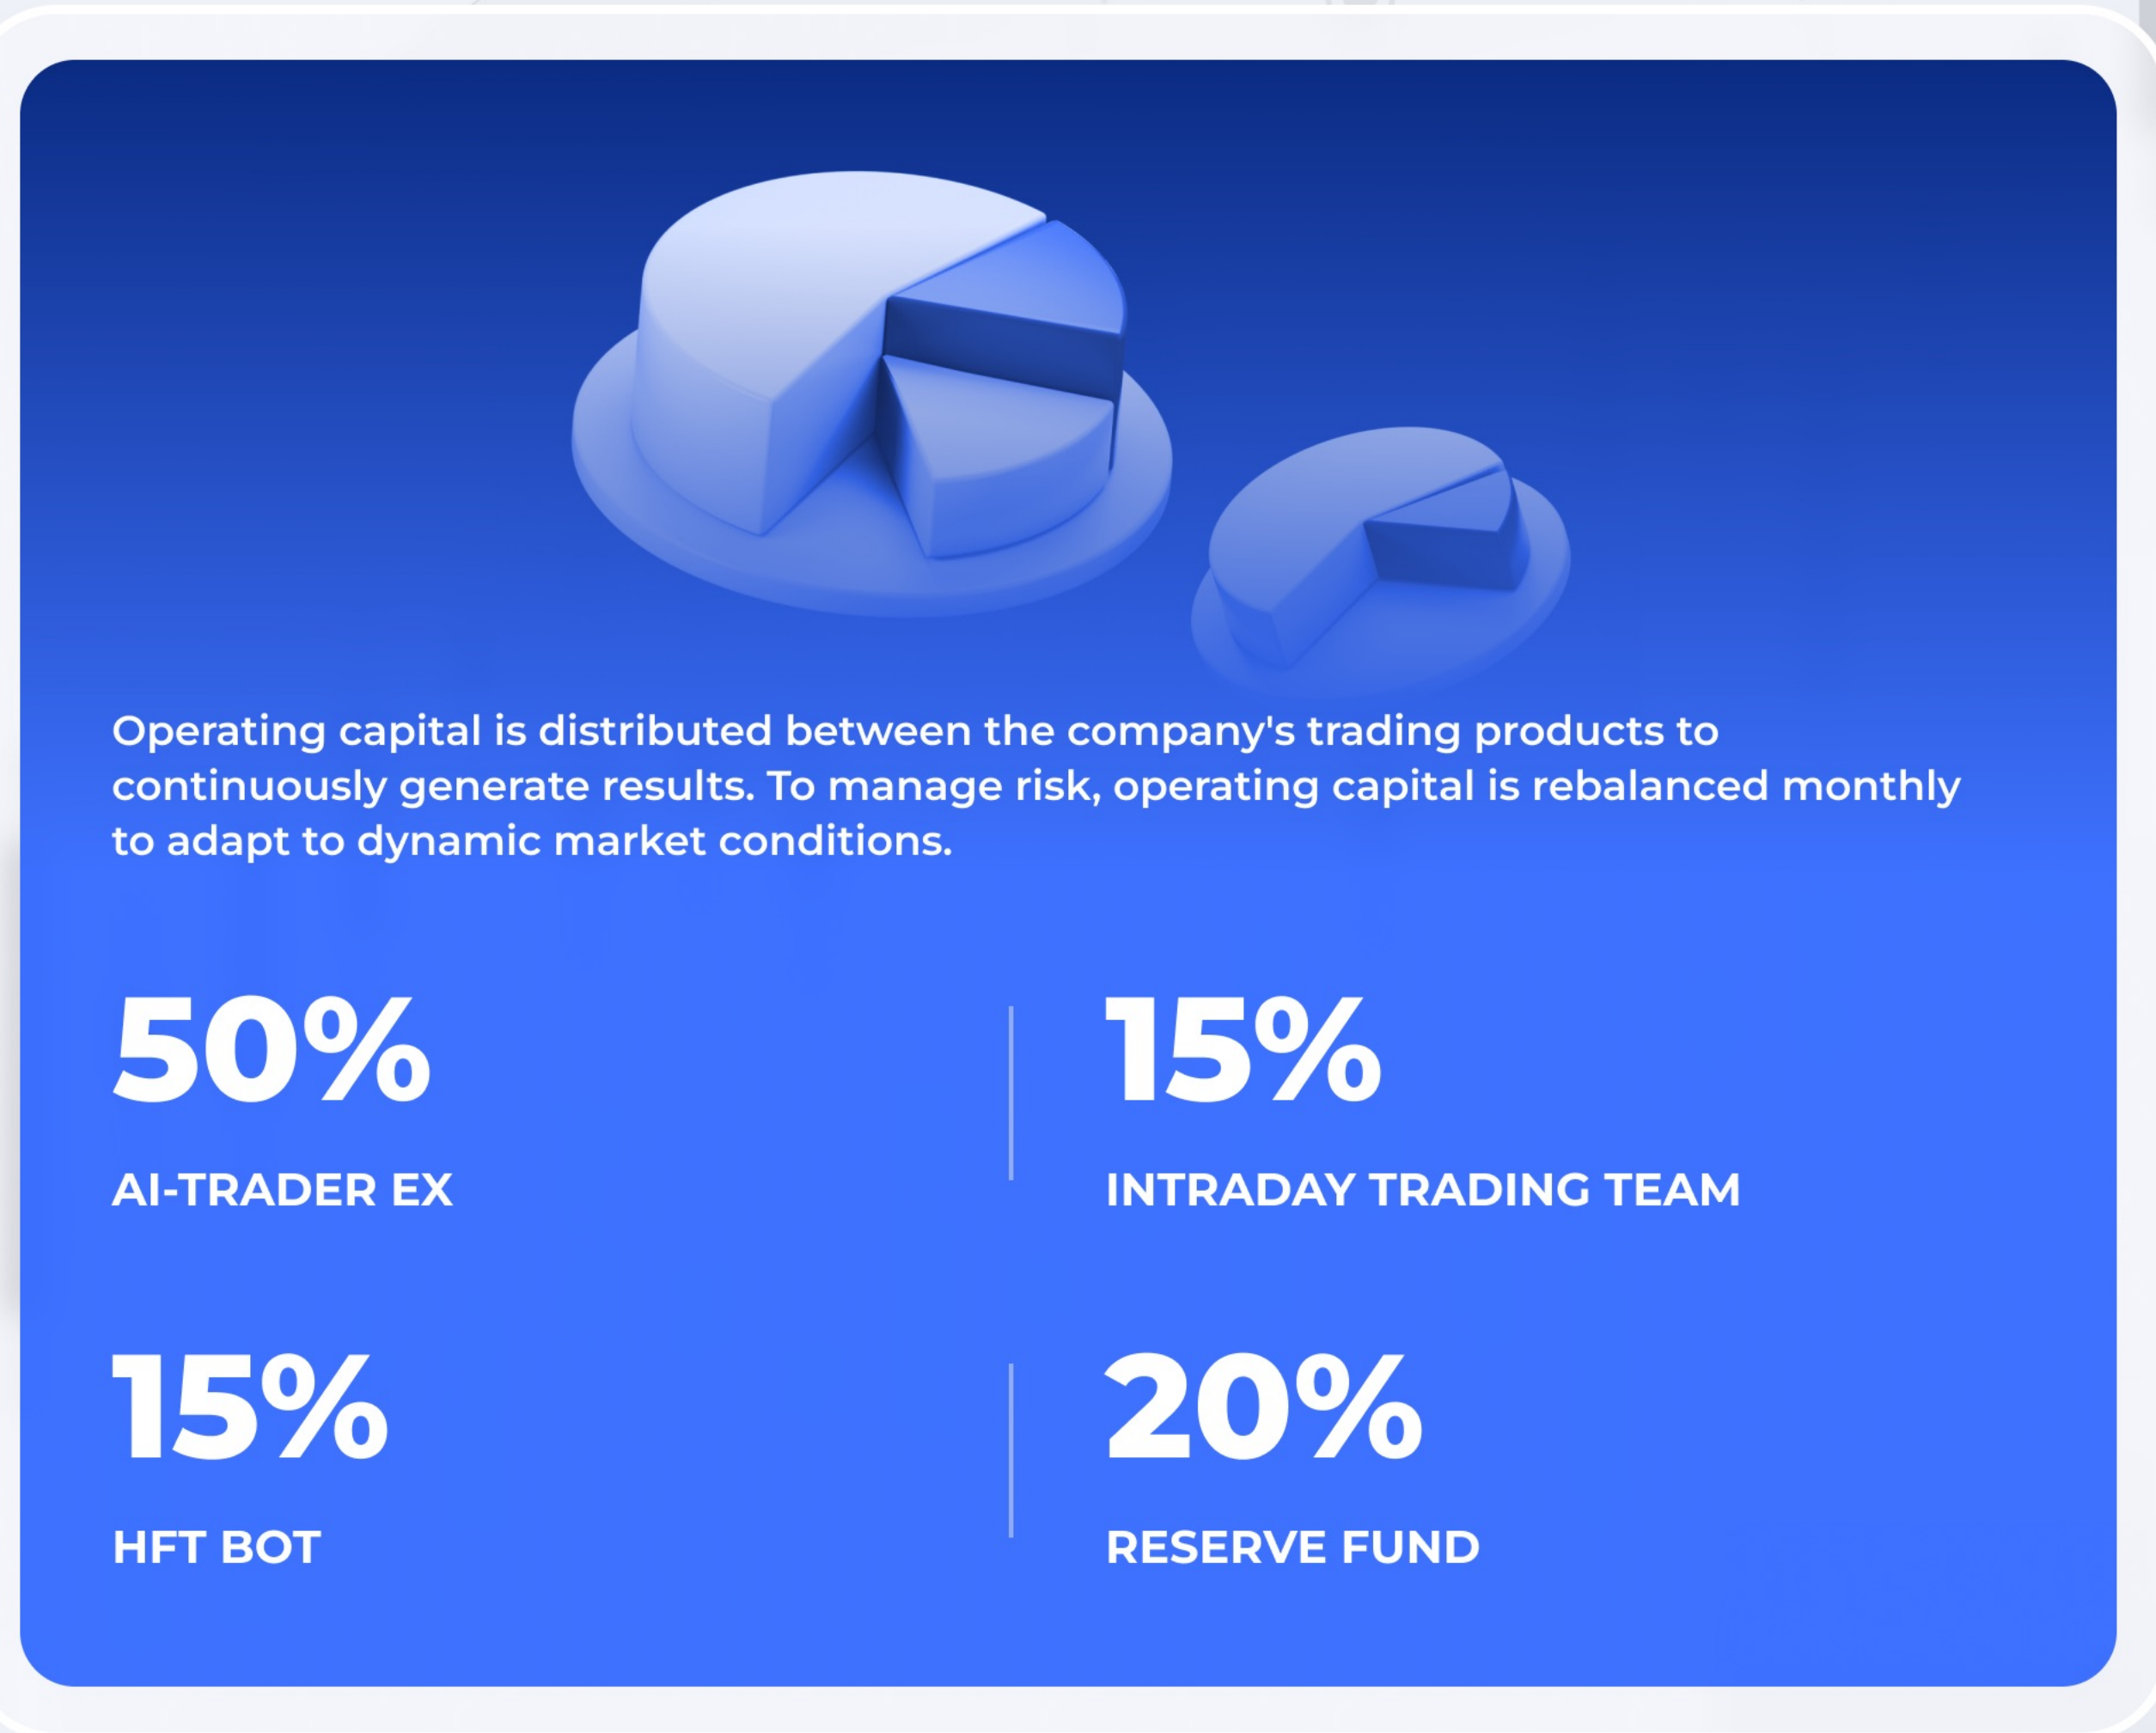

ASSETS ARE DISTRIBUTED AMONG:

The company's strategy involves distribution of assets among the operational capital and the reserve fund.

Operating capital is distributed among the company's trading products to continuously generate profits.

The reserve can be used in two ways: as a fail-safe (to open positions in the portfolio) and as a hedge against already open positions.

Operating capital is distributed between the company's trading products to continuously generate results. To manage risk, operating capital is rebalanced monthly to adapt to dynamic market conditions.

# REVENUE SOURCES

## DISTRIBUTION

## SECURE, ANONYMOUS, MULTIFUNCTIONAL

### FEATURES:

- ✓ MPC-based Crypto Wallet (Multi Part Computation) with a passwordless policy – provides security on par with banking solutions
- ✓ The MPC (Multi-Part-Computation) model is a modern spin on the concept of “multi-sig” wallets, with improved security. On creation, the private key is divided into several encrypted parts, which are stored in different places ( part 1 – on the device, part 2 – on the server, parts 3-4-5 – on additional devices). To sign a transaction, multiple parts of the key must be matched. Thus, even if the server is hacked, the attacker will not be able to obtain the complete key to the wallet
- ✓ **Wallet restoration without seed phrase** through use of social auth — through multi-factor authentication, we can represent one part of the secret as a combination of OAuth tokens and the user's device.
- ✓ **Integrated crypto-fiat exchange** with the ability to link a fiat bank card for quick asset purchases and the possibility of cross-chain exchanges
- ✓ **Smart permission scanner** finds all smart contracts that can sign transactions from your wallet and allows you to change access rules
- ✓ **Optional AML-compliance** for all user's transactions
- ✓ **Advanced privacy options:** built-in transaction anonymization function acts as a cryptocurrency mixer and allows you to protect your identity from bad actors

**LIQUIDFLOW PROTOCOL**

**Integra LiquidFlow** is a self-hosted protocol that enables traders to aggregate their liquidity and connects them with cross-chain exchanges for P2P trading. By crowdsourcing liquidity through LiquidFlow, we solve the problem of fragmentation of the cryptocurrency market and give traders access to cross-chain trading without additional technical difficulties.

- ✓ **Crowdsourced Liquidity**  
Retail traders' liquidity is aggregated and used to close trades for participants at the best prices.
- ✓ **Progressive decentralization**  
Token holders of \$ITE will have the opportunity to participate in the development of the exchange by supporting or blocking platform improvement proposals.
- ✓ **Secure & Scalable**
- ✓ **More approachable way to cross-chain trading**

**REVENUE SOURCES**

LiquidFlow Protocol can profit off such operations:

**SAAS EXCHANGE INFRASTRUCTURE WITH P2P-AGGREGATED LIQUIDITY**

Our core B2B product is a turnkey solution to create your own crypto exchange using our infrastructure capabilities. Full kit includes software, assistance in implementation and maintenance of the project. Speed of the system is guaranteed by our company's liquidity pools, which are used to enhance and conduct trading operations.

**LIQUIDITY AGGREGATION AND PROVISION**

For every trading transaction that occurs with Integra Liquidity, we receive commissions, as well as additional compensation in the form of cash rewards from clients.

## \$ITE (INTEGRA PERFORMANCE INDEX)

\$ITE is an internal platform token that is used for any financial transactions throughout the Integra ecosystem.

Since token issuance depends on trading results, the \$ITE token itself can be represented as a **constant trading algorithm performance index**.

## PRICE STABILIZATION

Price destabilization risk is also hedged by partial collateralization with highly liquid assets.

## ITE EMISSION

Token issuance occurs as a result of profits from trading. Daily, the algorithm trading results are recorded in the system and distributed among users.

Once a month, during payout, the system finalizes trading calculations and generates the number of tokens corresponding to the final profit, which is then sent to users' accounts.

## TOKEN PRICING MECHANISM

The initial token price is set at 1 ITE: 1 USD and is algorithmically maintained within stable limits ( $p < 0.01$ ) through such mechanisms:

- portfolio rebalancing
- token burning.

## EXTRA LIQUIDITY

Additional liquidity obtained as extra profits from current and future products is distributed to a reserve storage for volatility stabilization.

Additionally, the mass usage of products among the ecosystem users will ensure constant token activity and demand.

- ✓ Minimum deposit package replenishment - \$5
- ✓ Estimated profits on deposit packages - up to **15% monthly**
- ✓ Deposit packages are activated **on Monday**
- ✓ Income is accrued **five days a week – from Mon to Fri.**
- ✓ Income can be withdrawn **after the 25th date of each month.**
- ✓ Deposit package can be withdrawn **after 365 trading days**
- ✓ Deposit package will be renewed automatically **5 days after expiration.**
- ✓ In order to take part in the affiliate program, no deposit package is required.
- ✓ In order to access funds on your Partner balance, **minimum deposit package of \$100 is required**
- ✓ Weekly withdrawal limit from Partner balance is **equal to your total deposit amount**
- ✓ Minimum withdrawal amount - \$25
- ✓ Withdrawal request processing time - **up to 72 hours**

# AFFILIATE PROGRAM

## INCOME TYPES:

-  **Direct sales – personal recommendation**
-  **Residual income – from your structure**
-  **Extra Bonus – achieving new Ranks**

-  The affiliate program consists of 15 referral levels and extra bonus ranks. Getting through these levels will give you a new rank and will also increase your profits from direct sales. Starting at \$25,000 turnover, you can achieve a rank of Gold Partner and earn additional bonuses.

**Silver partner**  
**\$10 000**

To achieve next rank  
**min. +\$15 000**

Next career rank  
**Golden partner**  
Required extra bonus turnover  
**\$25 000**

 First line affiliates are your direct referrals

100% added to extra bonus turnover

Extra bonus turnover:  
**100%**  
from line 1

# HOW TO CALCULATE

## EXTRA BONUS TURNOVER

Current career rank  
**Silver partner**  
**\$10 000**

To achieve next rank  
**min. +\$15 000**

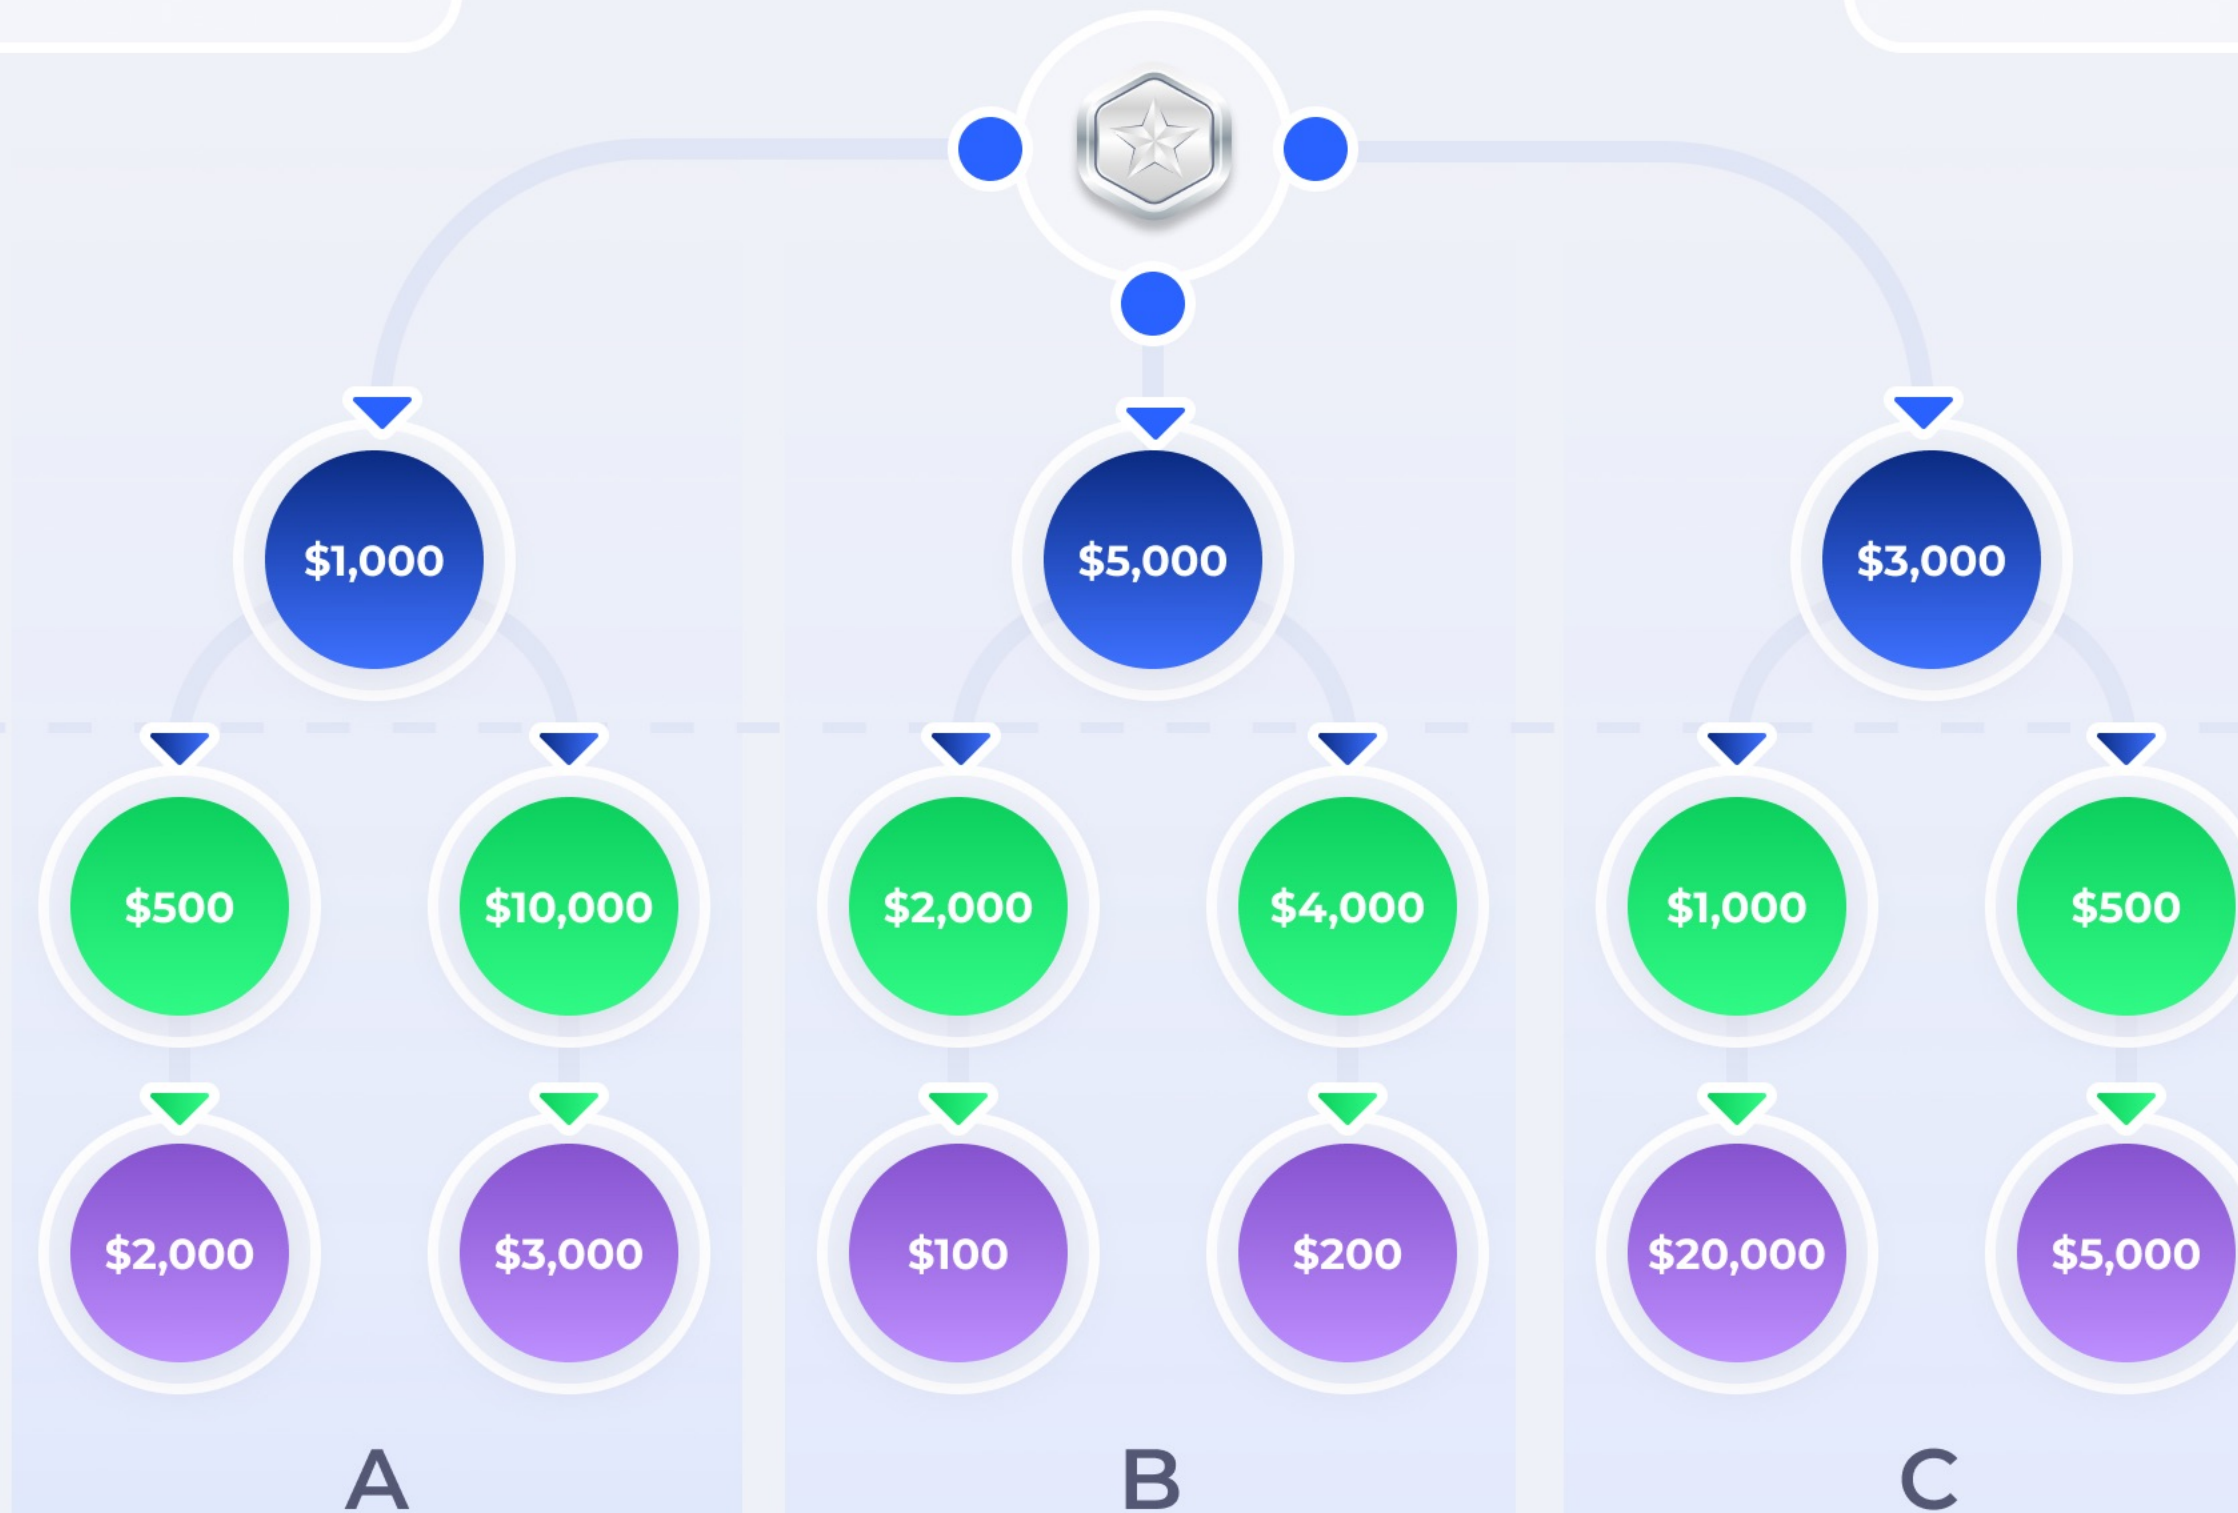

Next career rank  
**Golden partner**  
Required extra bonus turnover  
**\$25 000**

1st line affiliates are your direct referrals

2nd line affiliates

3rd line affiliates

Extra bonus turnover:

**100%**  
from 1st line

**50%**  
from branches (A,B,C), but no more than

**33%**  
from next rank requirement:

**$\$25\ 000 \times 33\% = \$8\ 250$**

# HOW TO CALCULATE

## EXTRA BONUS TURNOVER

### Branch A turnover

Starting from line 2

$$(\$500 + \$10\,000 + \$2\,000 + \$3\,000) \times 50\%$$

$$= \$7\,750$$

\$7 750 < \$8 250 – (\$7 750 is added to turnover)

### Branch B turnover

Starting from line 2

$$(\$2\,000 + \$4\,000 + \$100 + \$200) \times 50\%$$

$$= \$3\,150$$

\$3 150 < \$8 250 – (\$3 150 is added to turnover)

### Branch C turnover

Starting from line 2

$$(\$1\,000 + \$500 + \$20\,000 + \$5\,000) \times 50\%$$

$$= \$13\,250$$

\$13 250 > \$8 250 – (\$8 250 is added to turnover, leftover \$5 000 will be added after achieving next rank)

### Total Extra Bonus Turnover:

|                   |          |                |   |  |
|-------------------|----------|----------------|---|--|
| <b>\$10 000</b> + | 1st line | <b>\$9 000</b> | } | <b>\$38 150 &gt; \$25 000</b><br>Extra Bonus - \$1 000 |
|                   | Branch A | <b>\$7 750</b> |   |  |
|                   | Branch B | <b>\$3 150</b> |   |  |
|                   | Branch C | <b>\$8 250</b> |   |  |

## OFFICIAL EVENTS

### CONFERENCES AND LIVE EVENTS

An integral part of Integra's corporate culture is bringing meetings for users and partners of the company.

Our quarterly schedule of offline events in different parts of the world will provide an opportunity for active platform users to receive additional rewards for their loyalty and activity.

#### ON SCHEDULE:

- ✓ Meetings with company's top management
- ✓ Collective networking
- ✓ Education, motivation, self-development
- ✓ Award ceremonies for top affiliates
- ✓ Detailed reports on company's activities
- ✓ Future announcements

### ONLINE BROADCASTS

To educate our community and broaden their horizons in the field of modern technologies, we plan to conduct regular online webinars, where we will inform users about industry innovations and the opportunities that open up with their help.

- ✓ IT-industry (Information Technologies)
- ✓ Cryptocurrency news and blockchain startups
- ✓ Investment strategies
- ✓ AMA-sessions with traders and industry leaders
- ✓ Online-development and personal branding
- ✓ Affiliate program news
- ✓ Platform and product updates

# SHARED ACTIVITIES

## CORPORATE CULTURE

### EXCITING JOURNEYS

Mutual trips are some of the main components of a fuller lifestyle at Integra.

In addition to building new partnerships, travelling has an overall hugely positive impact on team productivity.

### TEAM TOURS AND EXPEDITIONS

In addition to recreation in resort areas, we also intend to offer some exotic tourism to our users, where they can not only relax mentally, but also challenge the nature.

- ✓ Mountain hiking
- ✓ Extreme sports
- ✓ Speleological expeditions
- ✓ Diving and snorkeling
- ✓ Auto and moto-tours
- ✓ Historical tours
