

Integra Limited LLC

Risks Disclosure

Please read this Risks Disclosure carefully before using or accessing the Services provided by Integra Limited LLC. Each Client engaged in transactions with virtual currencies and/or in the virtual currencies markets (including, but not limited to cryptocurrency, foreign exchange “Forex”) must clearly understand and acknowledge that this type of activity includes a high degree of risk.

By accessing or using our Services, you hereby explicitly acknowledge your awareness of the potential risks related to using virtual currencies and any other forms of activity available through Company’s Services.

General Provisions

"Risks" are defined as potential financial losses that may occur through engaging in activities and for reasons described down below. Engaging in transactions (sending, receiving, buying, selling or trading) in the financial markets carries a potentially high risk of losses. This warning may not contain all the information regarding all possible potential risks due to a variety of possible situations. Access to Services and transactions shall be available only for those who understand and admit all possible hazards associated with such activities and are able to incur potential financial losses. Before accessing and using the Services, one should take a responsible approach and choose the strategy based on their own research using all available resources and knowledge. Responsibility for the selection and performance of a particular instrument, calculation of risks and use of financial resources rests exclusively with the Client. When using the Services, one should not fully focus on profitability of trade operations and successful performance demonstrated in the previous years, as these do not guarantee future profit.

Market risks and risks associated with virtual currencies

Market risk is described as a possibility to close the order at a significantly different from the price contained in the order itself. Financial markets enable a significant number of participants to operate with different amounts of money, objectives and strategies. This fact increases the possibility of substantial price movements within shorter time periods and, as a result, inability to fulfill some orders. As with any asset, the value of virtual currencies is subject to drastic changes and can go up or down, making for a substantial chance of profit as well as loss of money when buying, selling or storing virtual currencies. By accessing and using the Services, you hereby represent that you understand the inherent risks associated with using

virtual currencies networks, and that you have a working knowledge of the usage and intricacies of virtual currencies. You hereby agree that we are not responsible for the operation, functionality or security of the third-party payment processing networks and not liable for any loss of value you may encounter due to any operating change, malfunction or failure in such networks. You further understand that the markets for these virtual currencies are highly volatile, and that there are substantial risks associated with virtual currencies, including loss of value. Upon entering into any transaction, you represent that you have been, are, and will be solely responsible for making your own independent appraisal into the risks of the transaction and the underlying virtual currency.

Technical risks

Engaging in transactions through Company's Services involves risks associated with the operation of the Platform, including potential failures in hardware and software. Such malfunctions in electronic equipment may lead to unexpected and unpredictable results for the Clients and, as a result, incur potential financial losses. Therefore, technical risks are defined as the possibility of significant losses by the Client due to malfunction of hardware and software used to operate in the financial markets. The aforementioned malfunctions may be caused by hardware and/or software errors, and can be related to both natural causes, as well as failure by the Client to comply with the rules of the Services. While using the Services, Client bears the risks that may arise due to reasons, including but not limited to: Client's ignorance of the Services and/or their improper use; unauthorized access by third parties to Client's personal email and/or mobile phone; all possible situations in which the Client intentionally or mistakenly transferred their account data to third parties; hardware/software malfunctions; quality of communication on the Client's end; Client's failure to read the information from the Company read in a timely manner; any error in the information, communications, electronic and other systems of the Client; and any force majeure arising on the Client's end.

Legal and socio-political risks

Such risks are associated with the possibility of significant losses due to changes in the current legislation, including taxation, as well as due to significant changes in the economic and political situation due to reasons such as changes of government/governance and possible social instability following such changes.

Force Majeure

The Company may not be held responsible for the Client's losses caused directly or indirectly by the restrictions imposed by the government and/or financial markets

due to actions or conditions outlined as "force majeure". The Client must be aware of the possibility of incurring substantial losses due to circumstances that are not possible to anticipate or influence, including but not limited to: terrorist attacks, declared war and any power action showing signs of war, temporary or prolonged suspension of the financial markets, instability in financial markets accompanied by a sharp drop in liquidity, natural disasters, government decisions, foreign intervention, substantial changes in the mode of operation by counterparties, including liquidity providers, service companies and banks.
